e', 'sort']
```

```
In [4]: print(help(list.append))
```

```
Help on method_descriptor:
```

```
append(self, object, /)
    Append object to the end of the list.
```

```
None
```

```
In [7]: class Person:
        age = 21
        def greet(self):
            print("Hello")
        print(Person.greet)
        print(Person.age)
```

```
<function Person.greet at 0x000001F677CFAA60>
21
```

## Object:

- Instance of class

```
In [17]: class Person:
         age = 21
         def greet(self):
             print("Hello")
         p = Person()
         p.greet()
```

Hello

```
In [10]: p.age
```

Out[10]: 21

```
In [15]: def add():
         c = 2+3
         print(c)
         add()
```

5

### Constructors

```
In [19]: class Apssdc:
         d = "python"
         def __init__(self):
             print("i am a constructor")
         x = Apssdc()
         x.d
```

i am a constructor

Out[19]: 'python'

```
In [26]: class Apssdc:
         def __init__(self,a,b):
             print("i am a constructor")
             print(a,b)
         x = Apssdc(10,20)
```

i am a constructor  
10 20

```
In [27]: class Apssdc:
          def __init__(self,name,number):
              self.name=name
              self.number=number
          def display(self):
              print(self.name)
              print(self.number)
          def display1(self):
              print(self.number)
x = Apssdc("alekhya",9876543210)
x.display()
```

alekhya  
9876543210

```
In [25]: x.display1()
```

9876543210

## Inheritance

```
In [33]: class A:#base class/parent class
          def details(self,name):
              self.name=name
              print(self.name)
          class B(A):#derived class/child class
              def display(self):
                  print("derived class")
z = B()
z.display()
z.details("alekhya")
```

derived class  
alekhya

## Multiple Inheritance

- one class acquires the properties of one or more parent class

```
In [36]: class A:
          def display(self):
              print("i am from a class")
          class B:
              def display1(self):
                  print("i am from b class")
          class C(A,B):
              def display2(self):
                  print("i am child class")
          x = C()
          x.display()
          x.display1()
          x.display2()
```

```
i am from a class
i am from b class
i am child class
```

```
In [37]: #Multi Level inheritance
          class A:
              def display(self):
                  print("i am from a class")
          class B(A):
              def display1(self):
                  print("i am from b class")
          class C(B):
              def display2(self):
                  print("i am child class")
          x = C()
          x.display()
          x.display1()
          x.display2()
```

```
i am from a class
i am from b class
i am child class
```

```
